

ARCON MTM Functional Abilities Summary

This is an example of what the raw data would look like when performing MTM testing. If you receive data like this, you would see that your claimant is at an extremely functional level.

CASE STUDY:

Joe is a construction worker and has had a MVA, resulting in injury. He needs to function at a very heavy level in order to meet his job demands. After appropriate rehabilitation intervention, a Functional Abilities Evaluation is conducted, and it reveals the data that is outlined in the chart below. As you can see, Joe is able to perform the majority of activities at a *constant* level, except for stoop, crouch, and push/pull cart 41 lbs, which he can perform at a *frequent* basis. Therefore, he is functioning very well, and it is determined that he fully meets the demands of his occupation.

Construction Worker: Classification Very Heavy

Functional Abilities Evaluation utilizing MTM Norms: Meets Job Demands, Very Functional
